

## Final Deliverables Report

<b>Date</b>	14.11.2022
<b>Team ID</b>	PNT2022TMID09404
<b>Project Name</b>	Inventory Management System for Retailers

### Team members and their Contribution:

Name	Roll no	Contribution
Dwaraka kavyasudha	111419104028	Frontend – 5 Pages, Integration of Sendgrid, Deployment of using docker and Kubernetes.
Mandi ObulReddy	111419104058	Frontend – 5 Pages, Documentation
Menta Venkata Sai Charan	111419104061	Frontend – 4 Pages, Documentation
Konka Venkata sai lakshmi	111419104049	Backend Fully (For all 14 Pages), Integration of IBM Cloud, Deployment of using docker and Kubernetes.

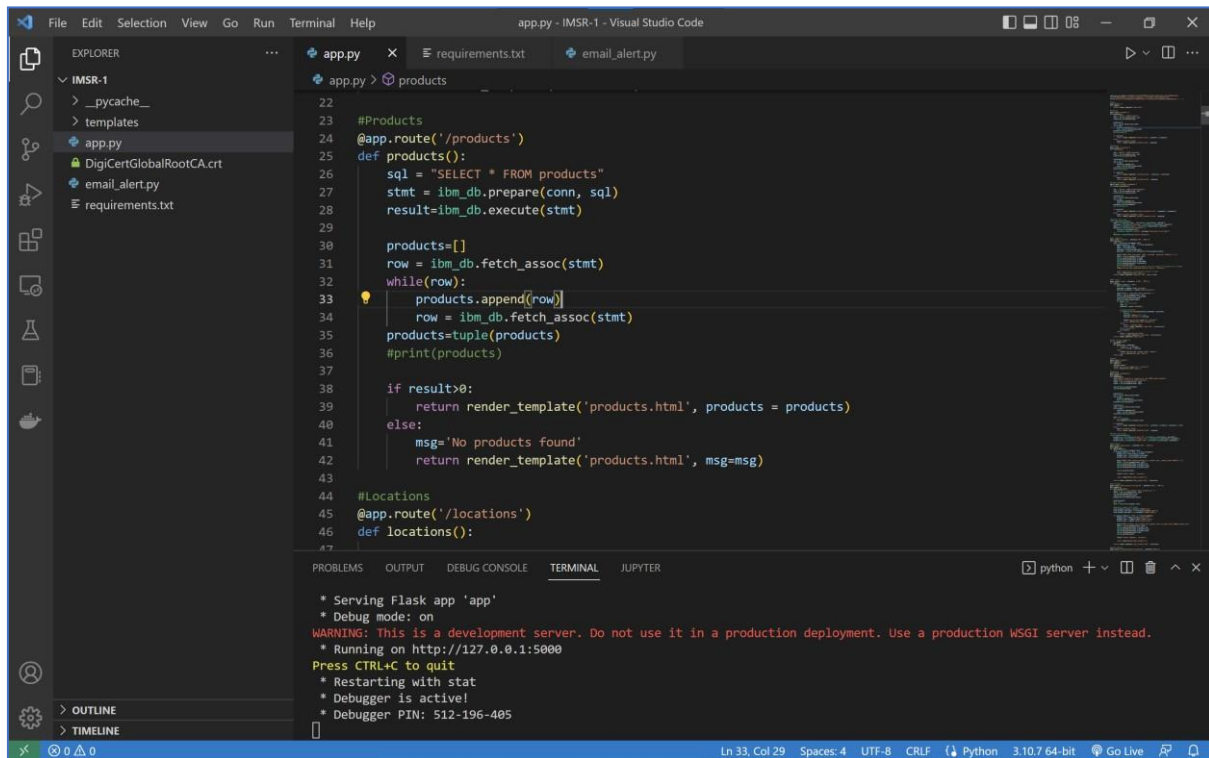

### Introduction:

1. Sprint 1 – Backend
2. Sprint 2 – Frontend
3. Sprint 3 – IBM Cloud Integration + Integration of SendGrid
4. Sprint 4 – Deploying the application using Docker and Kubernetes

## Sprint 1 – Backend:

All the routes to each page and APIs are created.

Example, (For Products page)

```
File Edit Selection View Go Run Terminal Help
app.py - IMSR-1 - Visual Studio Code

EXPLORER
IMSR-1
  > __pycache__
  > templates
  app.py
  DigiCertGlobalRootCA.crt
  email_alert.py
  requirements.txt

app.py
22
23 #Products
24 @app.route('/products')
25 def products():
26     sql = "SELECT * FROM products"
27     stmt = ibm_db.prepare(conn, sql)
28     result=ibm_db.execute(stmt)
29
30     products=[]
31     row = ibm_db.fetch_assoc(stmt)
32     while(row):
33         products.append(row)
34         row = ibm_db.fetch_assoc(stmt)
35     products=tuple(products)
36     #print(products)
37
38     if result>0:
39         return render_template('products.html', products = products)
40     else:
41         msg='No products found'
42         return render_template('products.html', msg=msg)
43
44 #Locations
45 @app.route('/locations')
46 def locations():
47
TERMINAL
python
* Serving Flask app 'app'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
* Debugger is active!
* Debugger PIN: 512-196-405
```

## Sprint 2 – Frontend:

The frontend is written using HTML, CSS (using Bootstrap) and JavaScript for all the pages to which the routes created in Sprint 1.

For Example, (The Hierarchy of different pages and the code for login page)

Sample FrontEnd Pages,

Home Page,

## Login Page,

Dwaraka, Kavyasu

Dashboard Email API Marketing Design Library Stats Activity Suppressions Settings

Welcome, Dwaraka.!

To get up and running quickly, please follow the steps outlined below.

Send your first emails with Twilio SendGrid

Create a sender identity

Before sending email, you'll need to create a sender identity. There are [two ways](#) to do this, but we recommend creating a Single Sender to get set up quickly and test your email integration.

Your sender identity is the "from" email address your recipients will see in their inbox. [Learn more](#) about this.

Your Business to me <jane.doe@your\_business.com>

Create a Single Sender Authenticate a domain instead

Email Received on Shortage of materials at particular warehouse or Main Inventory:

## Sprint 4 (Deploying the application using Docker and Kubernetes):

**Note:** Make sure to create a Dockerfile in the project folder.

Login into DockerHub in Project Folder using command prompt. This connects local docker desktop to cloud docker hub.

```
C:\Windows\System32\cmd.exe
Microsoft Windows [Version 10.0.19044.2130]

Traceback (most recent call last):
```

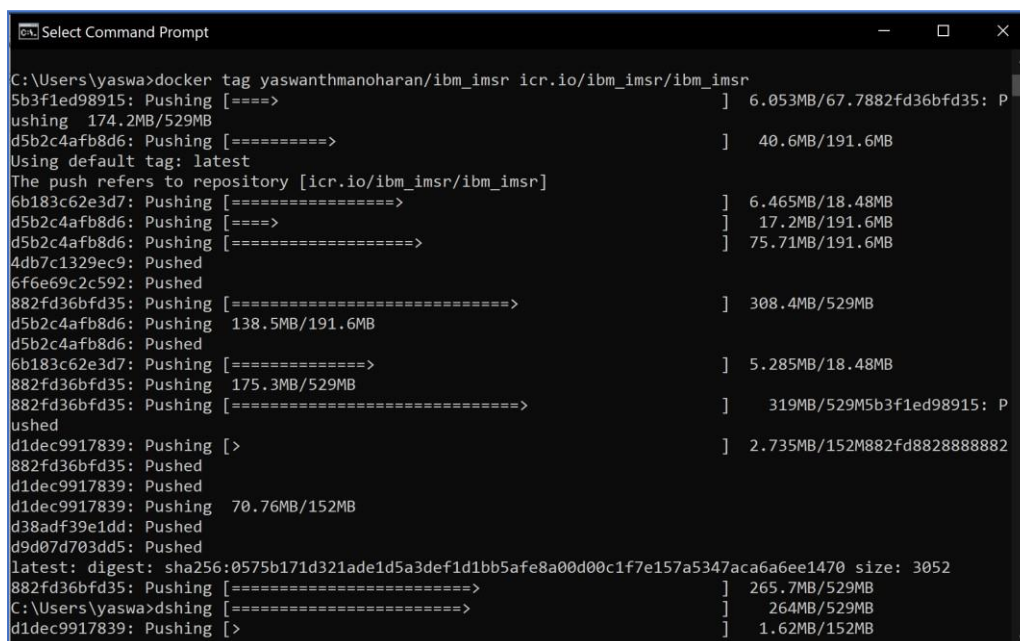

Create a valid Deployment.yaml file,

```
PS C:\Users\yaswa\Downloads\IBM\IMSR-1> kubectl apply -f deployment.yaml
deployment.apps/ibmimsr created
PS C:\Users\yaswa\Downloads\IBM\IMSR-1> []
```

Create a namespace in IBM Container registry,

Pushing the project into IBM container Registry,

**Note:** Create a Kubernetes Cluster in IBM Cloud and wait for the work node to get fully deployed.

Then, Login into Kubernetes Cluster using the following commands,

Expose your application using the following command and check for the port number using the next command.

```
Command Prompt
C:\Users\yaswa>
The configuration for cdoiksuf0bmgvvug0qs0 was downloaded successfully.
Added context for cdoiksuf0bmgvvug0qs0 to the current kubeconfig file.
You can now execute 'kubectl' commands against your cluster. For example, run 'kubectl get nodes'.
If you are accessing the cluster for the first time, 'kubectl' commands might fail for a few seconds while RBAC synchronizes.

C:\Users\yaswa>kubectl get pods
NAME                                READY   STATUS             RESTARTS   AGE
ibm-inventory-management-system-for-retailers-6cd7dfcc7b-8q2w2  1/1     Running            0           10h

ibmimsr-586d66c8c8-kkjqp           0/1     ContainerCreating  0           26s

C:\Users\yaswa>kubectl expose deployment ibmimsr --type=NodePort --name=ibmimsr
service/ibmimsr exposed

C:\Users\yaswa>kubectl describe service ibmimsr
error: unknown command "describe" for "kubectl"
Did you mean this?
  describe

C:\Users\yaswa>kubectl describe service ibmimsr
Name:         ibmimsr
Namespace:    default
Labels:       app=ibmimsr
Annotations:  <none>
Selector:     app=ibmimsr
Type:         NodePort
IP Family Policy: SingleStack
IP Families:  IPv4
IP:           172.21.98.28
IPs:          172.21.98.28
Port:         <unset> 5000/TCP
TargetPort:   5000/TCP
NodePort:     <unset> 30958/TCP
Endpoints:    172.30.116.13:5000
Session Affinity: None
External Traffic Policy: Cluster
Events:       <none>

C:\Users\yaswa>
```

Then, Check for the public IP address in your IBM Kubernetes Cluster under Worker Node,

The screenshot shows the IBM Cloud console interface for the 'ibm-imsr-project' cluster. The 'Worker nodes' tab is selected, displaying a table of worker nodes. The first node, '0000004c', is highlighted, showing its status as 'Normal', worker pool as 'default', zone as 'Milan 01', private IP as '10.144.212.35', public IP as '169.51.207.105', and version as '1.24.7\_1543'.

Name	Status	Worker pool	Zone	Private IP	Public IP	Version
0000004c	Normal	default	Milan 01	10.144.212.35	169.51.207.105	1.24.7_1543

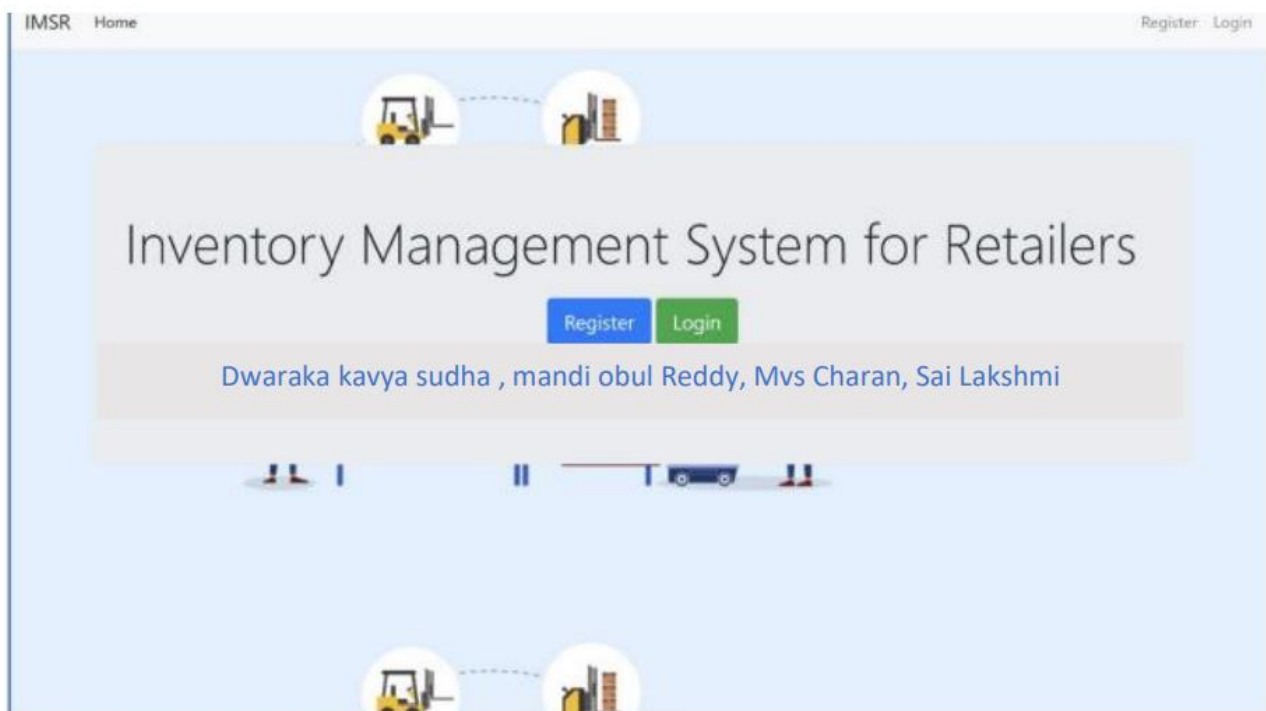

Thus we have the Public IP address and the Nodeport.

Now just type in this format - <Public\_IP>:<NodePort>

For our Inventory management system application it is, **169.51.207.105:30958**

Type this in the browser and click enter to access the deployed application,

**Result:**

Thus In this way We developed a “Inventory management System for Retailers” using Python, Sendgrid and IBM Cloud Services (IBM DB2, IBM Container registry, IBM Kubernetes).

# Thank You!
